SUMMARY:

Certified **AWS Solutions Architect, SysOps Administrator, Developer and Google Cloud Engineer** with 5+ years of hands-on experience in cloud and DevOps engineering. Expert in deploying fault-tolerant cloud infrastructure, optimizing CI/CD pipelines, and implementing security best practices. Proficient in Terraform, Kubernetes, and monitoring tools to ensure system reliability, and performance visibility. Advancing toward **OCI Architect Associate and Professional certifications to broaden multi-cloud proficiency across AWS, Azure, and Oracle Cloud.**

TECHNICAL SKILLS:

Languages: Python, JavaScript, Bash / shell scripting, AWS/Azure CLI, PowerShell, YAML, Golang, Typescript.

Networking Skills: Network Engineering, Linux, VPN, SSH, DNS, Firewall, Virtual Ips, RTP, WAF, ASG, CDN.

Cloud Skills: AWS, Azure, GCP, Oracle, Private Cloud.

DevOps Tools: Maven, Ansible, Docker, Jenkins, Kubernetes, Terraform, Helm, Azure DevOps, MLOps.

Databases: MySQL, RDS, Aurora, DynamoDB, PostgreSQL, Mongo DB, Oracle, Cassandra, Redis.

Monitoring Tools: Prometheus, Grafana, Datadog, CloudWatch, App Insights, Splunk, Dynatrace, ELK.

Other Skills: Version Control, Confluence, Github Actions, Git, GitLab, JIRA, Repo Management, ElastiCache

PROFESSIONAL EXPERIENCE:

Sr. DevOps Engineer / SRE, WIS International

(Apr 2023 – Present)

- Architected and deployed multi-cloud infrastructure across Azure and Oracle Cloud Infrastructure (OCI), leveraging services such as **OCI Compute, VCN, Block Volumes, Object Storage, Load Balancer, and Identity Domains** to support scalable enterprise platforms.
- Designed and implemented **OCI resource provisioning using Terraform**, enabling consistent multi-environment deployments and reducing provisioning time by 90%.
- Led application and database migration initiatives from Azure/AWS to OCI, including VM migration, Oracle Database migration to Autonomous Database, and Object Storage-based data transfer for large datasets.
- Implemented OCI IAM policies, Compartments structure, Dynamic Groups, and Vault to enhance identity governance and secrets management in accordance with Oracle security guidelines.
- Designed **hybrid connectivity** between on-prem, Azure, AWS, and OCI using IPsec VPN, OCI DRG, Azure VPN Gateway, FastConnect planning, enabling secure multi-cloud communication.
- Built disaster recovery architectures using OCI Object Storage cross-region replication, Block Volume backups, and **Multi-AD failover patterns**, improving RTO/RPO alignment across platforms.
- Deployed and maintained **containerized workloads on Oracle Container Engine for Kubernetes (OKE)**, integrating it with Azure AKS for multi-cloud orchestration and CI/CD pipelines.
- Developed CI/CD pipelines for **OCI-based microservices** using Azure DevOps and GitHub Actions, automating provisioning, artifact delivery, and deployment in OCI DevOps and OKE.
- Integrated Oracle Cloud Observability & Management (Logging, Monitoring, Alarms) to improve real-time visibility and reduce incident response times by **40%**.
- Implemented cross-cloud cost optimization for OCI/Azure resources, reducing monthly cloud spend by **up to 35%** across non-prod environments. Opting to Reserve based instances and Cost savings plan
- Engineered blue-green and canary deployment strategies across **AKS and OKE**, reducing downtime and enabling safer rollouts in multi-cloud production systems.
- Strengthened system security pipelines by integrating **SonarQube**, Terraform compliance checks, and Oracle Cloud Security Zones, reducing risk of misconfiguration.
- Led offshore teams in migrating workloads to OCI, enforcing best practices in DevOps automation, IaC, and cloud governance through Terraform modules and reusable CI/CD templates.
- Collaborated on major incidents spanning Azure, OCI, and on-prem, performing deep-dive RCA and providing 24/7 on-call support for critical enterprise systems.

Cloud Engineer, Amazon Web Services (AWS)

(Jul 2021 – Apr 2023)

- Collaborated daily with cross-functional teams—including developers, QA engineers, and product managers—to design, develop, and deploy highly available, scalable, and **fault-tolerant applications** using Amazon Web Services (AWS) infrastructure and services.
- Led the integration of Continuous Integration/Continuous Deployment (CI/CD) pipelines, utilizing tools like Git, **Jenkins**, **AWS CodePipeline**, **AWS CodeBuild**, and **CodeDeploy** to accelerate the software development life cycle, reduce manual interventions by 60%, and streamline deployments.
- Migrated legacy on-premises applications to the AWS cloud, employing services such as IAM, EC2, S3, RDS, MQ, Load Balancers, Lambda, and API Gateway, **resulting in a 70% improvement** in application performance and a 25% reduction in costs.
- Implemented Infrastructure as Code (IaC) using AWS CloudFormation and **Terraform**, **automating deployment** processes and enabling rapid scaling of resources to meet fluctuating demand.
- Set up and maintained robust monitoring and logging solutions using **AWS CloudWatch**, **CloudTrail**, and third-party tools like **Splunk** and **Datadog**, ensuring maximum reliability and performance of production applications.
- Employed Agile methodologies by participating in daily stand-ups, sprint planning, and retrospectives to optimize the software development process, foster team collaboration, and enhance overall product quality.
- Collaborated with the QA team to integrate automated testing within the **CI/CD pipelines**, enhancing code quality and reducing defects in production.
- **Managed multi-account AWS environments** using **AWS Control Tower**, **AWS Config**, **AWS Resilience Hub**, and **AWS Firewall Manager** to enforce governance, security, and resiliency best practices.
- Provided mentorship and guidance to junior team members, fostering a culture of continuous learning and improvement. Ensured Code quality Control and Code reviewed for deploying to higher lanes.

Graduate / Teaching Assistant, Texas State University

(Aug 2019 – May 2021)

- Lead Developer in Designing and Managing University websites using proprietary software GATO.
- Assisted two professors in teaching and administered exams, grading for 50 Grad/ Undergrad Students.

Cloud Engineer (Free Lancer)

(May 2018 – Jun 2019)

- Implemented infrastructure automation using Terraform to provision and manage cloud resources, reducing manual effort and ensuring consistency across deployments.
- Managed security and compliance by configuring **AWS Identity and Access Management (IAM)** roles and policies, ensuring adherence to organizational security standards.
- Orchestrated microservices containerized applications using **Docker and Kubernetes (EKS)**, improving deployment consistency.
- Optimized database performance by administering AWS RDS instances, performing routine backups, and implementing read replicas and failover strategies.
- Monitored and improved application performance using **AWS CloudWatch and Prometheus**, identifying bottlenecks and enhancing system reliability.

ACCOMPLISHMENTS:

AWS Certified Solution Architect
AWS Certified Developer

AWS Certified SysOps Administrator
Google Certified Cloud Engineer

EDUCATION:

Texas State University
Master of Science, Computer Science (Data Science Concentration)
Jawaharlal Nehru Technological University
Bachelor of Technology, Computer Science

(Aug 2019 – May 2021)

(Aug 2015 - May 2019)
