SUMMARY:

Certified **AWS Solutions Architect, SysOps Administrator, and Google Cloud Engineer**. DevOps Specialist and Expert in deploying fault-tolerant cloud infrastructure, optimizing CI/CD pipelines, and implementing security best practices. Expertise in Terraform, Kubernetes, and monitoring solutions to ensure system stability and scalability

TECHNICAL SKILLS:

Languages: Python, Java, Bash / shell scripting, AWS/Azure CLI, PowerShell, YAML, Golang, Typescript.

Networking Skills: Network Engineering, Linux, VPN, SSH, DNS, Firewall, Virtual Ips, RTP, WAF, ASG, CDN.

Cloud Skills: AWS, Azure, GCP, Oracle, Private Cloud.

DevOps Tools: Maven, Ansible, Docker, Jenkins, Kubernetes, Terraform, Helm, Azure DevOps, MLOps. Harness. Chef, puppet, IAM, AD.

Databases: MySQL, RDS, Aurora, DynamoDB, PostgreSQL, Mongo DB, Oracle.

Monitoring Tools: Prometheus, Grafana, Datadog, CloudWatch, App Insights, Splunk, Dynatrace, ELK.

Other Skills: Version Control, Confluence, Github Actions, Git, GitLab, JIRA, Repo Management.

PROFESSIONAL EXPERIENCE:

Sr. DevOps Engineer / SRE, WIS International

(Apr 2023 – Present)

- Architected and deployed scalable cloud infrastructures on Microsoft Azure, utilizing services such as Blob Storage, **AKS , Application Gateway, Front Door**, and Azure Service Bus to ensure seamless inter-service communication.
- Implemented **Azure Key Vault** for enhanced security and secrets management across projects, safeguarding credentials and keys, resulting in a reduction of potential security breaches.
- Enhanced application performance monitoring and troubleshooting using Azure Application Insights, decreasing mean time to resolution (MTTR) for production issues.
- Directed continuous integration and continuous deployment (CI/CD) pipelines using **Azure DevOps**, increasing deployment frequency and ensuring 99.9% uptime for **critical production systems**.
- Led offshore development teams in adopting Best Practices, streamlining CI/CD pipelines with enhanced automation, and improving deployment success rates.
- Spearheaded System **Security** using the **SonarQube** within CI/CD workflows, which streamlined the code review process and reduced manual code inspection time for the development team.
- Advanced the integration of **Azure Active Directory (AD)** to optimize identity and access management, ensuring compliance with enterprise security policies.
- Directed cross-functional team efforts to troubleshoot and resolve complex technical issues, utilizing technologies such as **Terraform, Jenkins, Ansible, Docker, and Kubernetes**.
- Demonstrated exceptional commitment by supporting projects beyond regular hours to meet critical deadlines and provided on-call support, maintained system stability by involving Incident resolution and Root Cause Analysis.
- Recognized for innovative problem-solving by developing solutions to complex challenges, such as automating deployment scripts to reduce manual errors.
- Built large-scale production Environments and reduced provisioning time by **90% by implementing** Terraform-based infrastructure-as-code (IaC), ensuring consistent and rapid deployment across multiple environments.
- Implemented blue-green deployment strategies in Azure Kubernetes Service (AKS) and Configuration management, reducing production downtime and enabling safer, more controlled rollouts.
- Optimized cost analysis and auto-scaling in Azure to ensure high availability, scalability, and stability. Reduced monthly cloud spend **by 65% across non-production environments**.

- Developed real-time monitoring dashboards using **Prometheus and Grafana**, enhancing visibility into system health and reducing incident response times.

Cloud Engineer , Amazon AWS

(Jul 2021 – Apr 2023)

- Collaborated daily with cross-functional teams—including developers, QA engineers, and product managers—to design, develop, and deploy highly available, scalable, and **fault-tolerant applications** using Amazon Web Services (AWS) infrastructure and services.
- Led the integration of Continuous Integration/Continuous Deployment (CI/CD) pipelines, utilizing tools like Git, **Jenkins, AWS CodePipeline, AWS CodeBuild, and CodeDeploy** to accelerate the software development life cycle, reduce manual interventions by 60%, and streamline deployments.
- Migrated legacy on-premises applications to the AWS cloud, employing services such as IAM, EC2, S3, RDS, MQ, Load Balancers, Lambda, and API Gateway, **resulting in a 70% improvement** in application performance and a 25% reduction in costs.
- Implemented Infrastructure as Code (IaC) using AWS CloudFormation and **Terraform, automating deployment** processes and enabling rapid scaling of resources to meet fluctuating demand.
- Set up and maintained robust monitoring and logging solutions using **AWS CloudWatch, CloudTrail**, and third-party tools like **Splunk and Datadog**, ensuring maximum reliability and performance of production applications.
- Employed Agile methodologies by participating in daily stand-ups, sprint planning, and retrospectives to optimize the software development process, foster team collaboration, and enhance overall product quality.
- Collaborated with the QA team to integrate automated testing within the **CI/CD pipelines**, enhancing code quality and reducing defects in production.
- Provided mentorship and guidance to junior team members, fostering a culture of continuous learning and improvement. Ensured Code quality Control and Code reviewed for deploying to higher lanes.
- Regularly reviewed system performance metrics and logs to proactively identify potential issues, implementing preventive measures to enhance system stability.

Graduate / Teaching Assistant, Texas State University

(Aug 2019 – May 2021)

- Lead Developer in Designing and Managing University websites using proprietary software GATO.
- Assisted two professors in teaching and administered exams, grading for 50 Grad/ Undergrad Students.

Cloud Engineer, Sudhi Informatics

(May 2018 – Jun 2019)

- Implemented infrastructure automation using Terraform to provision and manage cloud resources, reducing manual effort and ensuring consistency across deployments.
- Managed security and compliance by configuring **AWS Identity and Access Management (IAM)** roles and policies, ensuring adherence to organizational security standards.
- Orchestrated microservices containerized applications using **Docker and Kubernetes (EKS)**, improving deployment consistency
- Optimized database performance by administering AWS RDS instances, performing routine backups, and implementing read replicas and failover strategies.
- Monitored and improved application performance using **AWS CloudWatch and Prometheus**, identifying bottlenecks and enhancing system reliability.

CERTIFICATIONS:

AWS Certified Solution Architect
AWS Certified Developer

AWS Certified SysOps Administrator
Google Certified Cloud Engineer

EDUCATION:

Texas State University

(Aug 2019 – May 2021)

Master of Science, Computer Science (Data Science Concentration)

Jawaharlal Nehru Technological University

(Aug 2015 - May 2019)

Bachelor of Technology, Computer Science
